

Medical Trials on Bodyguard Orthopaedic Supports

The following thermo graphic images were taken by Dr Villiam Amighetti – Sports doctor/Postural and biomechanical Consultant to Italian sports teams whilst carrying out a study on Nexus® Bodyguard.

- 1 year study on 200 people
- 2,500 thermo graphic images were taken
- Showing the relationship between Nexus® and thermoregulation.

The before shots on the left show inflammation and poor circulation due to soft tissue damage, the after shots on the right show increased blood circulation due to the application of infrared through a Nexus® Bodyguard orthopaedic support. This proves that Nexus®:

- Reduces inflammation,
- Increases micro-circulation and
- Accelerates healing processes

Note: Always seek medical advice for any injury
